

SOCI 626: Demographic Methods

Winter 2025

CLASSROOM: LEA, Room 819

TIME: Mondays 3:30 PM – 5:30 PM

PROFESSOR: Orsola Torrisi

Email: orsola.torrisi@mcgill.ca

I typically respond to emails within 24 hours. If you have not heard from me after 24 hours you may email me again to make sure I received your message.

Student hours: Mondays 5:45-6:45 PM. Please schedule an appointment at [this link](#)

Note: the appointments are for 15 minutes. If you need longer, simply schedule two sessions.

Please indicate whether we are meeting in person or via Zoom, and possibly a hint to what you'd like to discuss. If this day/time does not work for you, email me and we will find a suitable alternative.

1. Course Description

This course is designed to introduce Social Sciences Graduate Students to basic concepts and methods used by demographers to study population size, structure, and dynamics, and therefore to “think demographically”. The course will cover the collection, evaluation, and analysis of demographic data, including census, vital registration, and survey data; basic measures of mortality, fertility, and migration; life table construction; stable population theory; population projections; and related themes. At the end of the course students will be able to think systematically about how populations change through population growth, mortality, fertility, marriage, migration, changes in rates and composition, be familiar with fundamental demographic measures and methods, understand their strengths and limitations and see how they might apply demographic techniques to their own research.

1.1 Who is this course for?

- Students in the social sciences interested in how and why populations change in size and composition.
- Students that intend to analyse demographic dynamics in their research, or simply want to be able to evaluate and understand demographic trends and data.
- Students interested in empirical research and in working with real data.
- Students with a solid interest in methodology and quantitative research.

1.2 Prerequisites

There are no strict pre-requisites for this course, but some basic math skills (addition, subtraction, multiplication, division, and exponentiation) are necessary to be successful. I will not expect you to do calculus, but there are several demographic relationships that are best expressed with some reference to calculus which I may reference in class. You do not need to be a “stats or math” person, yet you need to be willing to look at, and work with tables, numbers, and mathematical formulae. Also, precision and notation are essential in demography. You will need a basic calculator for this class.

2. Course Goals

The course objectives include:

- Being familiar with the main sources of demographic data, including understanding how these are collected and their strengths and weaknesses.
- Learning the main demographic techniques used to describe population structure, analyse demographic dynamics, and evaluate demographic data.
- Being able to grasp the intuition behind the methods and think about how it could be applied in the context of different questions.
- Being able to apply demographic methods to real data — knowing which method is best suited to which context and which type of data, and why.
- Being able to read, understand, and critically evaluate scholarly research using these methods.

3. Instructional Method

The course consists of lectures, homework assignments, a mid-term and a final exam. The homework assignments are designed to help you learn to apply demographic methods covered in this course. The completion of the homework assignments and the timely application of the methods to data is key to comprehending the material covered in class. It is equally important to obtain an understanding of the logic behind the methods; such understanding will help in learning the material and in future applications.

4. Readings and Materials

All the material you will need to know will be detailed in my slides and will be discussed in class. However, I will draw from three main textbooks, each characterised by different degrees of mathematical “complexity”:

- Rowland, D. T. (2003). *Demographic Methods and Concepts*. Oxford: Oxford University Press. Good, mid-way. Simpler and more accessible than Preston et al. (2001); more advanced than Lundquist et al. (2015). The book can be requested via McGill’s library ([here](#)). Alternatively, you can purchase or rent an e-version from <https://www.vitalsource.com> or <https://www.redshelf.com>. Older Graduate Sociology students may be able to lend/sell this textbook since it has been used as main text in the past. Chapters/sections of topics that are covered in greater detail in this book will be posted on MyCourses.
- Preston, S. H, Heuveline P., and Guillot, M. (2001). *Demography: Measuring and Modelling Population Processes*. Oxford: Blackwell Publishers. Most math-advanced textbook – Electronic copy available on MyCourses.
- Lundquist, J. H., Anderton, D. L., & Yaukey, D. (2015). *Demography: The Study of Human Population*. Waveland Press, 4th Edition. Least math-advanced textbook – Electronic copy available on MyCourses.

A few other resources (hyperlinked) include:

- Watcher, K. (2006). *Essential Demographic Methods*. Harvard University Press. – Electronic copy available on MyCourses
- Hinde, A. (1998). *Demographic Methods*. New York: Oxford University Press.
- Population Reference Bureau (2021). [Population Handbook](#). A simple guide you can use as you would use a vocabulary
- UNFPA/IUSSP [training modules](#) – simple exercises and quizzes
- UNPD [World Population Prospects](#) – World countries demographic indicators (1950-2100)

5. Assignments and Grading

Your success in this class is important to me. You learn from me, your peers and I learn from you! Hence, the final course grade will be based on several components, described below, with the overall goal of incentivising continuous engagement with the material, regular feedback and peer collaboration. Please note that the below course requirements are non-negotiable. If you know you cannot meet them, do not take this course.

5.1 Homework assignments – 5% each, total 30% of final grade

There will be six homework assignments throughout the semester, each worth 5%. Each homework assignment will consist of 5 to 8 questions, including short-answer questions to assess your understanding of core concepts and problems that require you to apply the methods learned in class using provided data.

Assignments will be posted on MyCourses at noon on Tuesday of every even-numbered week (e.g., Week 2, Week 4, Week 6, etc.) and will be due by noon on the following Monday (e.g., Week 3, Week 5, Week 7, etc.). You are expected to upload both your written responses, and any calculations performed to answer questions requiring them. For the write-up, which will include formulas, you can use a simple processor such as Word or LaTeX/Overleaf, if you are familiar with it. Calculations can be done in a spreadsheet software (e.g., Excel) or specialised statistical software (e.g., Stata or R).

You are encouraged to work together, but you are supposed to have an independent write-up and submission. Remember that the assignments are low-stakes exercises, intended to give you regular practice and feedback. No little mistake will make or break your grade or your career; rather it likely will help you get better.

Good answers that receive full credit are:

- True, i.e., accurate calculations and reasonable interpretations
- Clear, no extra explanation needed
- Complete, demonstrating full (not partial) understanding
- Relevant to the question asked (i.e., no rambling about orthogonal concepts or implications)

5.2 Midterm exam – 30% of final grade

This will be a 2-hour in-class, closed-book exam and will cover all material presented up to Week 6. It will consist of both open-ended questions and exercises similar to the Homework Assignments and will take place on February 24th.

5.3 Final exam – 40% of final grade

This will be a 2-hour in-class, closed-book exam and will cover all course material. It will consist of both open-ended questions and exercises similar to the Homework Assignments and will take place on April 7th.

5.4 Summary of Grading Scheme

To summarise all the above, the grading scheme for this class is below:

Homework assignments	30% (5% each)	Due weeks 3, 5, 7, 9, 11, 13
Midterm exam	30%	February 24
Final exam	40%	April 7

5.5 Re-grading

Students who wish to contest a grade must do so in writing (by email, sent to me) providing the reasoning behind their challenge to the grade received within two weeks (15 working days) from the day on which the grades are returned (included). I will then re-evaluate, but also reserve the right to raise or lower the grade.

5.6 Exam make up

Sometimes our lives interfere with our coursework. This is a normal thing that happens for some students every semester. If you find yourself struggling to complete readings or assignments, please come to office hours so we can discuss academic accommodation options that can help you make the most out of the semester. However, please note that without prior discussions, proven emergency and/or medical circumstances, it will not be possible for me to have you make up exams or to grant extension for your homework assignments. If you are absent for such reasons, I will try my best to arrange alternatives provided the absence is properly justified and, when necessary, documented. Exams cannot be made up except for emergencies or medical circumstances. If you know you will miss either exam do not take this course. There is no K grade for this course and no exam make-up requests will be accepted after the end of the semester (April 7th).

6. Attendance

If you want to do well in this class, it is essential that you come to class. You will notice that the pace will be quite fast and we will cover a good amount of theoretical literature, applied research and contexts. Also, well... the class is going to be very small, so it will be immediately clear to me if missing patterns emerge.

7. Communication Policy

I will do my best to answer student emails within 24 hours. If you have not heard from me after 24 hours (excluding weekends) you may email me again to make sure I received your message. I will also be available by appointment, if students wish to discuss things one on one, outside of office hour times, but please do email me beforehand to schedule appointments.

8. Class Schedule Short (Provisional)

Week 1. (Jan. 6) – Introduction: demography as a field, data sources and basic concepts

Week 2. (Jan. 13) – Basic measures and population growth

Week 3. (Jan 20) – Population composition (age and sex) [Homework #1 Due \(Population Growth\)](#)

Week 4. (Jan 27) – Age standardisation and decomposition

Week 5. (Feb 3) – Mortality measures [Homework #2 Due \(Age & Sex Composition\)](#)

Week 6. (Feb 10) – Life tables

Week 7. (Feb 17) – Review for mid-term exam [Homework #3 Due \(Standardisation & Decomposition\)](#)

Week 8. (Feb 24) – Mid-term exam

READING WEEK (March 3)

Week 9. (March 10) – Fertility measures [Homework #4 Due \(Life tables\)](#)

Week 10. (March 17) – Stable and stationary population models

Week 11. (March 24) – Migration and population projections [Homework #5 Due \(Fertility\)](#)

Week 12. (March 31) – Review session [Homework #6 Due \(Migration/mock\)](#)

Week 13. (April 7) – Final Exam

Note that the scheduling of topics for the course listed below and associated readings are subject to change. Such changes, should they take place, will be announced ahead of time in class and through MyCourses. Students are responsible for keeping abreast of any changes made.

9. Class Schedule Detailed (Provisional)

Week 1 (Jan 6) – Intro: Demography as a field, data sources and basic concepts

Required readings

- Rowland, D. T. (2003). Chapter 1
- Li, T., & Xie, Y. (2022). The evolution of demographic methods. *Social Science Research*, 107, 102768. <https://doi.org/10.1016/j.ssresearch.2022.102768>

Optional readings

- Preston et al. (2001). Chapter 1, Sec. 1.1, 1.2, 1.6
- Lundquist et al. (2015). Chapters 1-2
- Hinde (1993). Chapter 1
- Canada Statistics. (2010). [2011 Census - About the Census: History of the Census of Canada](#)
- Duncan, G. J. (2008). When to promote, and when to avoid, a population perspective. *Demography*, 45(4), 763-784. <https://www.jstor.org/stable/25651474>
- Pesando, L. M., Dorélien, A., St-Denis, X., & Santos, A. (2023). Demography as a Field: Where We Came From and Where We Are Headed. *Canadian Studies in Population*, 50(3), 4. <https://doi.org/10.1007/s42650-023-00076-8>
- Rehner, R.R., F.R. Furstenburg, F.R., Belzer, A. (1999). How Much Do We Count? Interpretation and Error-Making in the Decennial Census. *Demography* 36(1):121-134. <http://www.jstor.org/stable/2648138>
- Xie, Y. (2000). Demography: Past, Present, and Future. *Journal of the American Statistical Association*, 95(450), 670–673. <https://doi.org/10.2307/2669415>

Week 2 (Jan 13) – Basic demographic measures and population growth

Required readings

- Rowland, D. T. (2003). Chapter 1 and 2

Optional readings

- Preston et al. (2001). Chapter 1, Sec 1.3-1.5, 1.7-1.9
- Lundquist et al. (2015). Chapter 3
- Palmore and Gardner (1994). Chapter 1
- Watcher (2006). Chapter 1, Sec. 1.1-1.3, 1.5
- Alexander, L. K., Lopes, B., Ricchetti-Masterson, K., & Yeatts, K. B. (2015). “What is person-time?” ERIC Notebook. https://sph.unc.edu/wp-content/uploads/sites/112/2015/07/nciph_ERIC4.pdf
- Becker S. (2013). Has the World Really Survived the Population Bomb? *Demography*. 50(6):2173-81. <http://link.springer.com/article/10.1007%2Fs13524-013-0236-y>
- Lam, D. (2011). How the World Survived the Population Bomb: Lessons From 50 Years of Extraordinary Demographic History.” *Demography*, 48(4): 1231-1262. <http://link.springer.com/article/10.1007%2Fs13524-011-0070-z>

Week 3 (Jan 20) – Population composition (age & sex)

DUE – Homework #1

Required readings

- Rowland, D. T. (2003). Chapter 3

Optional readings

- Preston et al. (2001). Chapter 2, focus on 2.1, 2.5
- Lundquist et al. (2015). Chapter 4
- Hinde (1999). Chapter 13. Sect 13.1-13.4
- Coale, A. J. (2017). How a population ages or grows younger. In *Population Growth* (pp. 47-58). Routledge. Access the Chapter here: <https://osf.io/rpc6m> (The author, Coale, discusses this article in this YouTube video: <https://www.youtube.com/watch?v=ek3nc7XtEOU>)

Week 4 (Jan 27) – Standardisation and decomposition

Required readings

- Rowland, D. T. (2003). Chapter 4
- Dowd, J. B., Andriano, L., Brazel, D. M., Rotondi, V., Block, P., Ding, X., ... & Mills, M. C. (2020). Demographic science aids in understanding the spread and fatality rates of COVID-19. *Proceedings of the National Academy of Sciences*, 117(18), 9696-9698. <https://doi.org/10.1073/pnas.2004911117>

Optional readings

- Preston et al. (2001). Chapter 2, Sec. 2.1-2.4
- Canudas-Romo, V. (2003). *Decomposition Methods in Demography*. Rozenberg Publishers.
- Frese J., Harkonen, J., & Hix, S. (2024). Brextinction? How cohort replacement has transformed support for Brexit. *European Journal of Political Research*. <https://doi.org/10.1111/1475-6765.12745>
- Ryder, N. B. (1985). The cohort as a concept in the study of social change. *American Sociological Review*, Vol. 30, No. 6 <https://doi.org/10.2307/2090964>

Week 5 (Feb 3) – Mortality measures

DUE – Homework #2

Required readings

- Rowland, D. T. (2003). Chapter 6
- van Raalte, A. A. (2021). What have we learned about mortality patterns over the past 25 years?. *Population Studies*, 75(sup1), 105-132. <https://www.tandfonline.com/doi/full/10.1080/00324728.2021.1967430>

Optional readings

- Aburto, J. M., Di Lego, V., Riffe, T., Kashyap, R., Van Raalte, A., & Torrissi, O. (2023). A global assessment of the impact of violence on lifetime uncertainty. *Science Advances*, 9(5), eadd9038. DOI: [10.1126/sciadv.add9038](https://doi.org/10.1126/sciadv.add9038)
- Canudas-Romo, V., & Becker, S. (2011). The crossover between life expectancies at birth and at age one: The imbalance in the life table. *Demographic Research*, 24, 113-144. <https://doi.org/10.4054/DemRes.2011.24.4>

Week 12 (March 31) – Review for Final Exam

Week 13 – Final Exam (April 7)

DUE – Homework #6

Course Policies

Use of Generative AI

One of the primary learning objectives for this course is to help you to learn how to calculate basic demographic indicators, apply proper demographic methods, write strong, clear and accurate descriptions of your results. In pursuit of these goals, you are permitted to use generative AI, such as ChatGPT, to assist with your understanding of the class material, but you are not permitted to use it to solve the homework assignments or write write-ups for you.

You may use generative AI to help you

- Get clarification or elaboration on key concepts and ideas covered in the course
- Summarise articles and readings
- Improve your writing by getting feedback on your use of vocabulary, making more coherent arguments, and reducing redundancies

You **may not** use generative AI to:

- Solve part or all your homework assignments or write part or all of them. All parts of the homework writing must originate from you. Copying AI generated text and claiming it as your own is plagiarism and will be treated as such according to the Academic Integrity Policy provided below.

Caveats on use of generative AI:

- Generative AI is well-known for confidently asserting made up information. You are responsible for the accuracy of your statements.
- Generative AI also regularly invents references in part or in full. You must add DOIs to all of your references. Also, be aware that ChatGPT does not have access to articles after 2021 nor to many studies before the 1990s.

Implications for grading and assessment:

- You are required to add a statement at the end of each submitted piece of work indicating if you used AI and, if so, for which permissible activities listed above. This declaration will not influence your grade.

Extraordinary Circumstances

In the event of extraordinary circumstances beyond the University's control, the content and/or evaluation scheme in this course is subject to change.

Copyright

All slides, video recordings, lecture notes, etc. remain the instructor's intellectual property. As such, you may use these only for your own learning (and research, with proper referencing/citation) ends. You are not permitted to disseminate or share these materials; doing so may violate the instructor's intellectual property rights and could be cause for disciplinary action.

Instructor generated course materials (e.g., handouts, notes, summaries, exam questions, recorded lectures, etc.) are protected by law and may not be copied or distributed in any form or in any medium without explicit permission of the instructor. Note that infringements of copyright can be subject to follow up by the University under the Code of Student Conduct and Disciplinary Procedures.

Inclusive Learning Environment

As the instructor of this course, I endeavour to provide an inclusive learning environment. However, if you experience barriers to learning in this course, do not hesitate to discuss them with me and the Office for Students with Disabilities, 514-398-6009.

Language of Submission

In accord with McGill University's Charter of Students' Rights, students in this course have the right to submit in English or in French any written work that is to be graded.

Conformément à la Charte des droits de l'étudiant de l'Université McGill, chaque étudiant a le droit de soumettre en français ou en anglais tout travail écrit devant être noté (sauf dans le cas des cours dont l'un des objets est la maîtrise d'une langue). Les étudiants de ce cours peuvent rédiger tous leurs travaux (incluant les examens) en français, mais doivent pour ce faire obtenir la permission préalable de la professeure. Aucune permission rétroactive ne sera accordée.

Indigenous Land Statement

McGill University is located on land which has long served as a site of meeting and exchange amongst Indigenous peoples, including the Haudenosaunee and Anishinaabe nations. McGill honours, recognises and respects these nations as the traditional stewards of the lands and waters on which we meet today.

Academic Integrity Policy

Just like writing a paper, copying other people's assignments constitutes plagiarism. Moreover, data analysis and demographic calculations are learned through trial and error. Please do not under any circumstance copy another student's work. If you are found to have done so, you may be referred to the appropriate Dean. I reserve the right to use text-matching or other appropriate software to compare work that has been submitted by different students.

McGill University values academic integrity. Therefore, all students must understand the meaning and consequences of cheating, plagiarism and other academic offences under the Code of Student Conduct and Disciplinary Procedures (see <http://www.mcgill.ca/students/srr/honest/> for more information)

L'université McGill attache une haute importance à l'honnêteté académique. Il incombe par conséquent à tous les étudiants de comprendre ce que l'on entend par tricherie, plagiat et autres infractions académiques, ainsi que les conséquences que peuvent avoir de telles actions, selon le Code de conduite de l'étudiant et des procédures disciplinaires (pour de plus amples renseignements, veuillez consulter le site <http://www.mcgill.ca/students/srr/honest/>)
